

# API/ASME systems from PMC Group

Newsletter 11-2013

Technical knowhow, design, components, assembly and testing – all under one roof. This concept is what makes PMC an industrial business partner who can provide hydraulic system solutions with full documentation in accordance with international standards, for example API 614, API 618, API 673 and ASME 16.5.

PMC's engineers have a high professional level and are closely following the latest development in the hydraulic field.

PMC is where our customers have their production and markets – whether it is in Europe, Asia, the Americas or other continents.

PMC focuses on logistics – to our customers this means not only certainty of optimal productivity, but also savings on time and costs in connection with handling and management.

PMC is constantly improving its management system in accordance with DS/EN ISO 9001:2008, and most of our companies have been environmentally certified according to ISO 14001.

If you need further information please email [info@pmctechnology.dk](mailto:info@pmctechnology.dk) or visit our stand No. 9856 in Hall M at the HI exhibition from 3 to 6 September 2013.

PMC Technology A/S is part of the leading Scandinavian hydraulics group, PMC Group. In addition to Scandinavia, the group operates in China, the US, India, Qatar and Poland – companies which services are available to our customers and divisions through PMC Technology A/S. In Denmark there are approx. 175 employees, primarily in Soeborg and Esbjerg.

The company has three divisions which handle relations with external customers. Each division offers unique and specialised professional skills, i.e.:

**PMC Windsyn** services all customers, Danish as well as international, within Wind Power Energy.

**PMC Technology** services all industrial customers with hydraulic systems, components, etc. The customers are partly Danish industrial customers and partly international OEM customers.

**PMC Hydropower** services all Off shore and Maritime customers as well as customers requiring service and maintenance.
